

# Is it time to switch your VMS?

## Ask Yourself these 5 Questions

1

### Does my current VMS have the right functionality?

Your business has likely evolved since you first implemented your VMS. If your system can't keep up with today's operational demands, lacks modern features, or frustrates your users, it may be holding you back.

2

### Am I getting the right support from my VMS Provider?

A great system is only as good as the support behind it. If you feel like just another ticket number, or response times are slow, it's worth exploring providers that offer more responsive and right-sized support.

3

### Is my VMS Cost Effective?

VMS costs have decreased in recent years, but many companies still overpay for underwhelming systems. If your spend doesn't match the value you're getting, you could likely save money (and gain better performance) by switching.

4

### Is my VMS Flexible and Configurable?

Flexibility is critical in today's workforce landscape. If your VMS lacks open APIs, limits customization, or forces you into rigid processes, you're not getting the agility your business needs.

5

### Do my users actually like my current VMS?

User adoption is a key success factor. If employees avoid the system, find workarounds, or complain about usability, your VMS may be more of a burden than a solution.

If you answered "no" to any one of these questions, it may be time to consider switching your VMS. Contact us today to see how easy it is to switch to Conexis VMS with our innovative Easy Switch program.
